WHAT THIS MEANS ON COURT

The comparison must distinguish makes, attempts and points. Identical three-point makes can coexist with very different efficiency if one team needs more attempts; the higher-leverage separator is usually the combination of two-point conversion, turnovers and free-throw pressure.

DATA, METHODS AND CONFIDENCE

OFFICIAL BOX SCORE

Team and player totals come from the official match record.

POSSESSION FORMULA

Estimated possessions = FGA + 0.44 x FTA - OREB + TOV.

ADVANCED RATES

ORTG, DRTG, NET RTG, eFG%, TS%, TOV%, OREB%, FTr, AST/FGM% and 3PA rate are calculated from the box score.

PLAYER RATES

PTS/100, REB/100, AST/100, STL/100 and TO/100 use each team's estimated possessions. USG% is the player's estimated finishing share.

SHOT-TIME RECONSTRUCTION

The play-by-play has game-clock events but no official shot-clock field. Possession starts and resets are reconstructed from event order.

QUALITY CONTROL

1032 play-by-play events were loaded; scoring is validated against the final score and malformed parent events are excluded from chronology calculations.

LIMITATION

This is a one-game descriptive analysis. It explains this match and does not establish a repeatable team identity without a larger sample.

FINAL COACHING CONCLUSIONS

FOR TROMSØ STORM

Protect the most efficient shot areas, reduce possessions ending in live-ball turnovers and connect offensive rebounds to higher-value attempts. Compare the team's 2PT, 3PT and free-throw profile before making a shooting-only diagnosis.

FOR FRØYA

Preserve the possession and shot-quality advantages that produced the result, but test whether the same profile survives against a different defensive scheme and a larger sample.

MATCH IN ONE SENTENCE

Frøya combined the stronger points-per-possession profile with the better balance between shot value, possession security and scoring distribution.
