WHAT THIS MEANS ON COURT

The comparison must distinguish makes, attempts and points. Identical three-point makes can coexist with very different efficiency if one team needs more attempts; the higher-leverage separator is usually the combination of two-point conversion, turnovers and free-throw pressure.

PLAYER-LEVEL ANALYST READ

Kongsberg Miners: EFFICIENT CORE

JoJo Anderson (35 pts, 101.7 TS%, 40.3 PTS/100), Erik Borg (18 pts, 78.7 TS%, 20.7 PTS/100), Joe Cookson (16 pts, 73.5 TS%, 18.4 PTS/100) led the most efficient scoring profiles among players with a meaningful attempt sample.

SCORING DISTRIBUTION

The leading scorers were JoJo Anderson (35), Pietro Mortarino (20), Erik Borg (18). The key question is whether the scoring came from sustainable shot quality, free throws or high-volume attempts.

CREATION AND SECURITY

JoJo Anderson supplied 10 assists. Dennis Valentino Tydeman Nordskag recorded 4 turnovers, so creation quality must be evaluated together with possession cost.

DATA, METHODS AND CONFIDENCE

OFFICIAL BOX SCORE

Team and player totals come from the official match record.

POSSESSION FORMULA

Estimated possessions = FGA + 0.44 x FTA - OREB + TOV.

ADVANCED RATES

ORTG, DRTG, NET RTG, eFG%, TS%, TOV%, OREB%, FTr, AST/FGM% and 3PA rate are calculated from the box score.

PLAYER RATES

PTS/100, REB/100, AST/100, STL/100 and TO/100 use each team's estimated possessions. USG% is the player's estimated finishing share.

SHOT-TIME RECONSTRUCTION

The play-by-play has game-clock events but no official shot-clock field. Possession starts and resets are reconstructed from event order.

QUALITY CONTROL

881 play-by-play events were loaded; scoring is validated against the final score and malformed parent events are excluded from chronology calculations.

LIMITATION

This is a one-game descriptive analysis. It explains this match and does not establish a repeatable team identity without a larger sample.

FINAL COACHING CONCLUSIONS

FOR KONGSBERG MINERS

Protect the most efficient shot areas, reduce possessions ending in live-ball turnovers and connect offensive rebounds to higher-value attempts. Compare the team's 2PT, 3PT and free-throw profile before making a shooting-only diagnosis.

FOR NIDAROS JETS

Preserve the possession and shot-quality advantages that produced the result, but test whether the same profile survives against a different defensive scheme and a larger sample.

MATCH IN ONE SENTENCE

Kongsberg Miners combined the stronger points-per-possession profile with the better balance between shot value, possession security and scoring distribution.
